Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner * Repository name *

 ameygodse007 / WADL-assignments ✓

Great repository names are short, unique, and descriptive. WADL-assignments is available. ration? How about [sturdy-octo-goggles?](#)

Description (optional)

☒  **Public**
Anyone on the internet can see this repository. You choose who can commit.

☐  **Private**
You choose who can see and commit to this repository.

Initialize this repository with:

Skip this step if you're importing an existing repository.

☐ **Add a README file**
This is where you can write a long description for your project. [Learn more.](#)

Add .gitignore
Choose which files not to track from a list of templates. [Learn more.](#)

.gitignore template: None ▼

Quick setup — if you've done this kind of thing before

Set up in Desktop

 or

HTTPS

SSH

https://github.com/ameygodse007/WADL-assignments.git

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

...or create a new repository on the command line

```
echo "# WADL-assignments" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/ameygodse007/WADL-assignments.git
git push -u origin main
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/ameygodse007/WADL-assignments.git
git branch -M main
git push -u origin main
```
